

# NET LAB: MIND MAPPING on NETWORKING

# NET LAB: NETWORKING CHALLENGES & DIFFICULTIES

- Albania: no umbrella organisations of VET providers; strong division/discrimination between private and public providers (getting more funding from the government); difficult in defining joint objective common to different VET providers
- Montenegro: issue of isolation on local level, national is quite ok, EU level there are problems too because there is not enough international collaboration
- Kosovo: there is no recognition of qualifications among different neighbouring countries in the Balkans. Same problem also at EU level or EU-MS level --> EQF levels are being referenced and this helps with recognition
